

Custom Engineering & Global Partnership

✓ Conveyor Systems:

Complete conveyor solutions for efficient product flow.

✓ Vision & Safety:

Advanced systems for safe, accessible operation.

✓ Pushers & Stoppers:

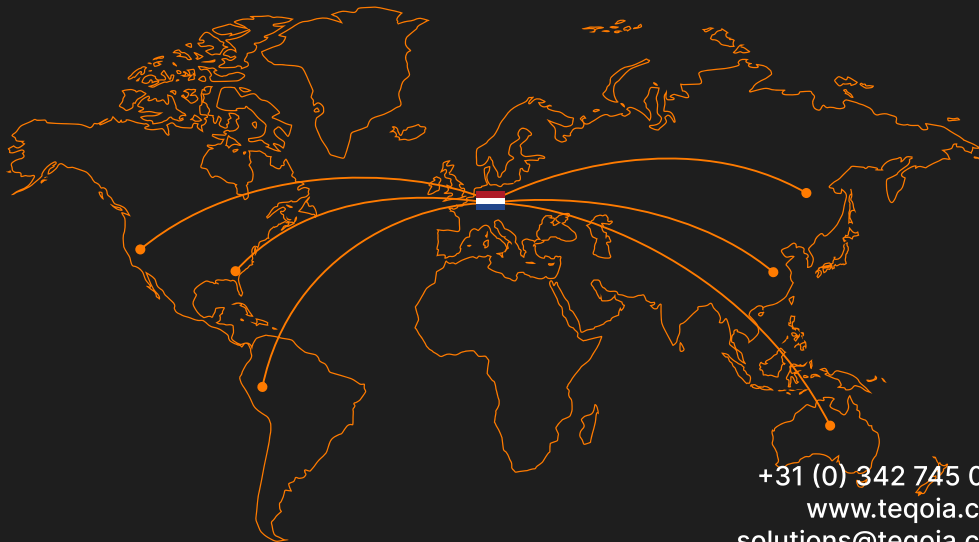

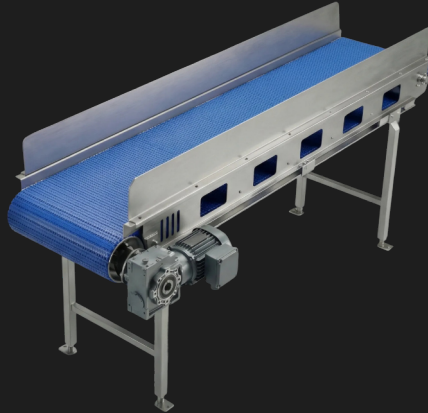

Controlled product handling and optimized flow.

✓ Service & Installation:

Global service and professional installation.

✓ Spare Parts & Support:

Reliable spare parts for maximum uptime.

GB100: Revolutionary Palletizing

The GB100 is designed for on-farm use, offering high performance while keeping the workspace open and accessible.

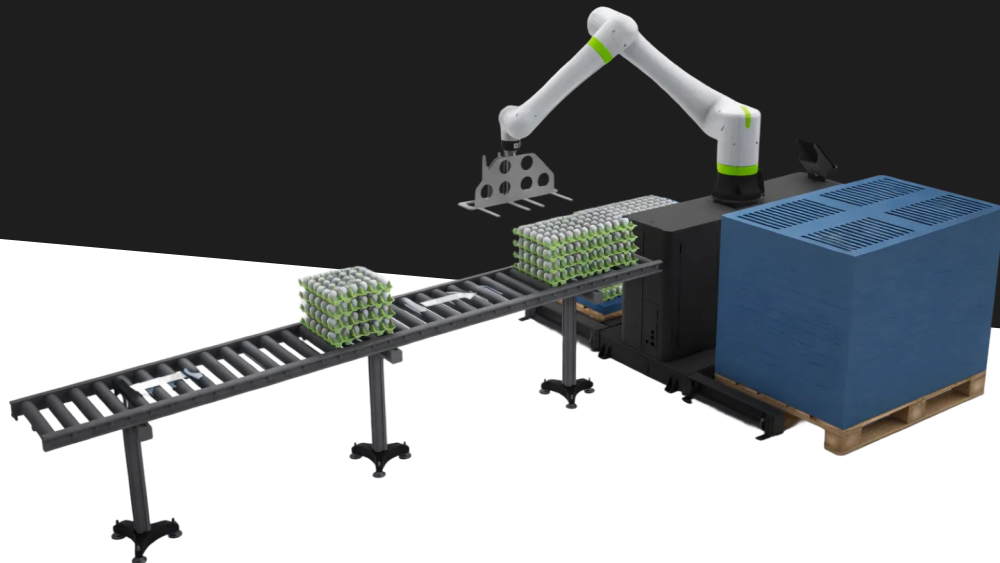

Why us?

We are a Dutch machine builder and system integrator in the egg industry with a clear vision for the future. Driven by innovation and craftsmanship, we develop smart, reliable solutions that make production processes worldwide more efficient, sustainable, and future-ready.

Our machines are delivered globally and supported by professional service, wherever you operate. With a strong focus on technology, detail, and partnership, we are building the egg industry of tomorrow.

The GB100 Solution

The GB100 Palletizer is the ideal solution for farms looking to automate their end-of-line process without sacrificing space. The system accurately identifies and places trays, ensuring a smooth and reliable flow from the conveyor to the pallet.

Small footprint. Maximum performance.

The revolutionary palletizer is specifically developed for on farm use and combines high performance with maximum safety and efficiency. The machine processes up to 100 CPH (36,000 eggs) and can be equipped with a safety vision system. This eliminates the need for mechanical safety measures such as a safety fence, while keeping the system highly accessible and safe to operate.

Thanks to its smart design, the palletizer features the smallest footprint on the market, allowing easy integration into existing on-farm spaces. In addition, the palletizer is available with a vacuum solution, enabling sealed egg trays to be accurately and reliably palletized without the use of a tray stacker. This makes the machine highly flexible and suitable for a wide range of packaging and palletizing concepts.

Key Features & Specs

- ✓ **Smart design:**
Minimal footprint. Maximum efficiency.
- ✓ **Ultra-Compact:**
Smallest footprint 248,9 cm x 129,5 cm 4'-9" ft x 5'-3"ft.
- ✓ **High Capacity:**
36,000 eggs / 100 CPH.
- ✓ **Zero Changeover:**
One system for sealed cartons and trays.
- ✓ **Dutch Engineering**
Reliable design with worldwide service support.
